

Uepaki — Seller Acquisition Operating System

Turning the pre-launch professional database into registered, approved, activated — and eventually transacting — professionals

Prepared for Sahil Mittal, Founder

8 October 2026 · Internal working document · Not public copy · Not legal advice

Contents

- How to read this document
- 1. What Sahil needs to know (summary)
- 2. Ground truth that constrains every message
- 3. What the database contains — audit
- 4. Seller acquisition segmentation model
- 5. The acquisition funnel
- 6. Priority model (OS P0–P4)
- 7. Campaign waves
- 8. Channel strategy
- 9. Category strategies (summary)
- 10. Solving the chicken-and-egg problem
- 11. The ideal initial community (strategic recommendation)
- 12. Founding-professional funnel
- 13. Acquisition economics
- 14. Daily and weekly operating system
- 15. Experimentation system
- 16. Final priority lists
- 17. Risks and safeguards
- 18. Quality gate

How to read this document

This is an operating system, not a research report. It tells a small Uepaki team who to approach, in what order, through which channel, with what proposition, what to measure, and when to stop or scale.

Source authority applied. Current founder decisions (Founder Decision Brief Rev 07 and the founder records of 6 October 2026) override everything else. Implementation evidence in the certification library decides what is verified. Brand Doctrine decides voice. The 3,584-record database decides who exists. Older strategy material is used only where it agrees with all of the above. Full audit: UEPAKI_SOURCE_AND_ASSUMPTION_AUDIT.md.

Status labels. Product statements carry one of: **DECIDED** (recorded founder decision — a policy, not an implementation claim), **UNDER DEVELOPMENT**, **PLANNED**, **UNVERIFIED**. *No product capability is confirmed LIVE in production by the evidence supplied.* Numerical targets marked **(recommendation)** are strategic choices, not forecasts. Thresholds marked **(initial test threshold)** are tripwires to be replaced by real data after the first wave.

Companion deliverables.

File	What it is
UEPAKI_SELLER_ACQUISITION_SEGMENTATION.xlsx	Audit tables, 22 segments, priority model, operating overlay for all 3,584 records, founding candidates, anchors, independents, premium list, data-quality issues, enrichment queue, economics model, weekly KPI tracker, experiment log
UEPAKI_FIRST_25_ACQUISITION_LIST.xlsx	Wave 0 pilot list with tracker
UEPAKI_FIRST_100_ACQUISITION_LIST.xlsx	Waves 0–1 list with tracker
UEPAKI_FIRST_300_ACQUISITION_LIST.xlsx	Waves 0–2 list with tracker
UEPAKI_CATEGORY_ACQUISITION_PLAYBOOK.md	Six category strategies

File	What it is
UEPAKI_CITY_ACQUISITION_PLAYBOOK.md	City sequencing and pods
UEPAKI_ACQUISITION_FUNNEL_AND_KPI_FRAMEWORK.md	Stage definitions and KPIs
UEPAKI_ACQUISITION_EXPERIMENTATION_FRAMEWORK.md	Controlled tests
UEPAKI_SOURCE_AND_ASSUMPTION_AUDIT.md	Sources, claim status, assumptions, quality gate

No list contains phone numbers, emails or WhatsApp links. Contacts are resolved from the master database by Prospect ID at the moment of outreach.

1. What Sahil needs to know (summary)

1. What the database actually contains. 3,584 professionals (not 3,700+; the canonical master has 3,584 after research-stage merges of 66 duplicates and 4,098 rejections). Six categories: Beauty & Makeup 1,169 · Fashion & Lifestyle 883 · Space & Design 590 · Lens & Motion 565 · Content & Media 248 · Digital & Visual Arts 129. 84% are emerging or established independents (tiers A–B); only 69 are premium or marquee. Two-thirds sit in the wedding and occasion economy. 3,375 have at least one verified route (own website, professional social account or a wedding-platform listing), but **none has given marketing consent** — and 1,160 of those routes are platform phone lines that must not be used for cold recruitment. The database's own priority marks 57% of records as P0 — too many to act on — so this system replaces it with a stricter operating priority: **961 P0, 1,661 P1, 347 P2, 58 P3 (premium, relationship-led), 557 P4 (hold). 1,538 are contact-ready today.**

2. Who should be approached first. The First 25: commercially active, recently active, directly contactable independents and mid-tier professionals in Delhi NCR and Mumbai, spread across all six categories and 17 segments — bridal and jewellery labels, makeup and mehendi artists, wedding and architecture photographers, interior and architecture studios, furniture makers, a calligraphy studio, a design studio, emcees and a lifestyle writer (table in §16). Then the First 100 in four cities, then the First 300 in ten.

3. Why. Not fame. They are first because they combine verified commercial activity, activity within the last 12 months (16 of the 25 within three months), a verified 1:1 route, high join likelihood and network value inside a city ecosystem. Fame and follower counts are not inputs to the score, and premium/marquee names cannot be P0.

4. Through which channel. One-to-one, human-written messages only: founder email to the business address published on the professional's own website (most labels, studios and photographers), or a direct message from Uepaki's professional Instagram account (makeup artists, illustrators, creators). WhatsApp only after a professional replies and agrees to it; template or bulk WhatsApp (AiSensy) only after a recorded opt-in. No cold calling of numbers listed on wedding platforms until legal review.

5. With what proposition. The founder-approved description — *a marketplace where customers can discover and buy products and connect with creative professionals for services, bookings and projects* — plus an honest invitation to be among the first professionals, in a small founding group formed city by city across complementary categories. No reach, ranking, lead, booking or income promise; never “free to join” (₹1 + GST registration on web); founding-programme terms only in wording the founder approves for 1:1 use (decision **FP-OUT**, §2).

6. In what sequence. Wave 0 pilot (25) → Wave 1 founding cohort (to 100, four cities) → Wave 2 category and city expansion (to 300, ten cities) → Wave 3 reserve, enrichment and tier-2 cities → Wave 4 launch window (premium names by warm introduction; announcements to opted-in professionals; PR with consented founding professionals) → Wave 5 post-launch activation-to-transaction. Each wave starts only when the previous one meets its exit criteria (§7).

7. What should be measured. The north star is **activated professionals** by category and city (approved, profile complete, at least one live listing). The ultimate measure is **transacting professionals** (first genuine enquiry, order or booking). Drivers: reply rate, interest rate, registration completion, approval rate, activation rate, founder hours per activated professional, cost per activated professional (§5, §13).

8. What should be stopped if it doesn't work. Any message/segment/channel cell with reply rate below 10% after 40 contacts; any channel with opt-outs or complaints above 2% or any platform warning; any wave whose registered professionals are not activating (below 50% within 14 days) — stop adding volume and fix onboarding first (§14).

9. What should be scaled if it works. Cells with reply rates of 20% or more and activation of 30% or more of interested professionals, over at least 30 contacts — double their weekly allocation, but only within onboarding capacity; cities whose first pod is complete and consented to be named; and consented peer introductions from activated professionals (no rewards — referral launch is deferred).

2. Ground truth that constrains every message

Topic	Position used in this system	Status
What Uepaki is (FD-06)	"A marketplace where customers can discover and buy products and connect with creative professionals for services, bookings and projects."	DECIDED wording; modules at launch UNVERIFIED (EV-09)
Who can join (E10)	Open to all sellers. Never "free to join"; never "curated" or "only professional-grade".	DECIDED; implementation UNVERIFIED
Registration charge (SUB-01)	₹1 + GST on web, disclosed in every relevant flow. App path not yet aligned.	DECIDED; app UNDER DEVELOPMENT
Paid placement (B1) / subscriptions and ranking (FD-03)	Policy: no paid placement; a paid subscription does not buy higher organic ranking. Public wording blocked (B4 / EV-08) . No visibility statements in outreach.	DECIDED policy; UNVERIFIED in production
Founding programme (S07)	First 500 sellers; lifetime 2-point commission reduction; promotion across four social channels via Creator Advantage; no organic-visibility advantage. Not public-cleared, not legally reviewed; qualifying rule, channel names and proof-of-promotion missing.	PLANNED (founder intent)
Early-bird offer	70% off MSP, first billing period, max 500, closes when "Pre Launch Period is Over"; clarifications CL-1–CL-3 open; EV-03 pending.	UNDER DEVELOPMENT — do not quote
2% social-promotion offer	Terms D2–D9 open.	PLANNED — do not mention
Referral programme	Launch deferred (E4).	PLANNED — no referral rewards
Fame Circle / Brand Ambassador	"Coming soon" stub; definitions unresolved.	PLANNED — do not mention
Collaboration features	Blocked (C023). Only as "Planned: ... Not available yet." if listed under RD-1a.	PLANNED
Bookings / milestones, custom requests, customer chat, analytics	Paid-plan features (23 C3, U-8); plan prices await EV-03.	DECIDED; gates UNDER DEVELOPMENT
Self-ship	Disabled for launch (E12). Courier partner unverified.	DECIDED
Commission and fees	Do not quote numbers (range unverified; ceiling blocked; gateway-fee alignment in progress).	UNVERIFIED
Off-platform client contact (SP-4a)	Open — expect this question from service professionals.	UNVERIFIED
KYC / approval checks (Q-KYC)	Open with lawyer/CA; admin approval flag not conclusively traced.	UNVERIFIED
Launch date	Tentative 1 January 2027, internal only. Never stated externally.	DECIDED (internal)
Stories and names (E3)	Real, consented people only.	DECIDED

Decisions this system needs from the founder (requests; nothing existing is altered).

ID	Question	Recommendation
FP-OUT	What founding-programme wording may be used in 1:1 outreach before legal review?	Waves 0–1: <i>"We are forming a founding group of professionals. The programme's written terms are being finalised and will be shared with you before you decide."</i> Add numbers only after lawyer review of "lifetime".
FP-QUAL	Founding cohort qualifying rule (already a missing record in S07).	Registration completed + approved + first live listing — so the 500 seats go to activated professionals, not to anyone who signs up.
Q-LEGAL-OUT	Lawyer review of the outreach method (1:1 email/DM to published business routes; WhatsApp only after opt-in; calls to platform-listed numbers) under the Digital Personal Data Protection Act, 2023 and its Rules, Meta's WhatsApp Business Messaging Policy, and the TRAI telemarketing framework.	Before Wave 1 at the latest. Wave 0 uses only own-site and professional-social routes.
NAME-CONSENT	Add a "consent to be named" step at activation.	Yes/no with date in the onboarding record.
CL-1, RD-1a, LP-1,	Already in the founder queue.	Resolve before Waves 2–3; they shape CTA,

ID	Question	Recommendation
SP-4a		objection handling and landing pages.

3. What the database contains — audit

3.1 Size, composition and quality

Measure	Value
Records (01_MASTER_V2)	3,584 (V2.1 new 2,499 · V2 new 876 · V2 enriched 110 · V1 existing 99)
Research-stage duplicates merged / rejected	66 / 4,098
Evidence quality	High 1,359 · Medium 2,001 · Low 224
Open manual-verification flags	1,088 (contact re-check 347, recency, city, evidence)
City unknown or unverified	233
Marketing / WhatsApp opt-in recorded	0

Category	Records	Tier A	Tier B	Tier C	Tier D/E	Mean DB conversion score	OS P0	Contact-ready
Beauty & Makeup	1,169	368	585	203	13	65.7	74	118
Fashion & Lifestyle	883	201	601	63	18	75.3	434	661
Space & Design	590	91	366	107	26	67.2	212	333
Lens & Motion	565	160	317	82	6	69.4	176	295
Content & Media	248	132	89	27	0	62.1	23	67
Digital & Visual Arts	129	46	48	29	6	63.4	42	64
Total	3,584	998	2,006	511	69	68.5	961	1,538

Cities. 57 city labels. Delhi NCR 792 · Mumbai 621 · Bengaluru 265 · Jaipur 246 · Pune 154 · Hyderabad 132 · Chennai 124 · Kolkata 121 · Ahmedabad 117 · Chandigarh 107 · then a long tail of tier-2 cities (Indore 79, Udaipur 76, Lucknow 69, Kochi 59, Goa 56 ...). Delhi NCR and Mumbai hold 39% of records and 51% of contact-ready professionals.

Contactability vs consent.

Contact class	Meaning	Records	Main categories
C1 Direct, verified	Email or form on own website, re-checked 2026-10-08	1,776	Fashion 805, Space 387, Lens 357
C2 Direct, pending re-check	Own-site route awaiting re-check	148	Space 116
C3 Professional social	Professional Instagram/LinkedIn only	291	Lens 114, Beauty 70, Content 51
C4 Platform phone only	Only a phone/WhatsApp number on a wedding/vendor platform	1,160	Beauty 960 , Content 120
C5 Not contactable	Not found or unverified	209	Space 71, Beauty 40, Digital 35

1,536 records publish a business WhatsApp number. That is contactability, not permission.

Recency. 1,216 records show public commercial activity within 3 months, 1,258 within 12 months, 705 within 24 months, and 405 have no dated activity in 24 months.

Ecosystems. Wedding & Occasion 2,351 (66%), Home & Space 747, Brand & Everyday Style 486.

3.2 Strengths

- **Strongest category for immediate conversion: Fashion & Lifestyle** — 805 verified emails, 537 active in the last 3 months (new products on own stores), many already sell through multi-designer platforms. Marketplace-literate and contactable.
- **Strongest network category: Lens & Motion and Space & Design** — photographers and studios work across categories; furniture/object makers have the highest network scores of any segment (47).
- **Strongest cities: Delhi NCR and Mumbai** — all six categories present with depth; then Bengaluru (Home & Space, design) and Jaipur (craft and occasion labels).
- **Strongest tier: B — established independents** (2,006; 639 OS-P0): credible to peers, still motivated by an additional channel.
- **Strongest acquisition opportunity: the Wedding & Occasion ecosystem in the anchor cities** — the same customer buys across labels, makeup, photography, mehendi, stationery and emcees, and these professionals already refer each other.

3.3 Weaknesses, gaps and data issues

Issue	Size	Consequence	Fix
Beauty contactability gap	960 of 1,169 reachable only via a wedding-platform phone line	Largest category, but only 118 contact-ready	Enrichment queue: find professional Instagram/email for the 250 highest-readiness records (13_ENRICHMENT_QUEUE); no cold WhatsApp
Priority inflation in the source	2,046 DB-P0 (57%)	Cannot sequence outreach	Operating priority (\$6)
Stale or unverifiable activity	405 records	Risk of contacting inactive businesses	Held in P4 until activity is confirmed
Pending contact re-checks	347 (116 in Space & Design)	Unusable routes	Re-check sprint before Wave 2 (cheapest unlock)
City unknown/unverified	233	Cannot be placed in city waves	Verify city
Low evidence	224	Unreliable scoring	Strengthen or drop
No individual name recorded	502 (studio/brand only)	Founder notes need a person's name	Find the founder/lead name from the site before contact
Possible duplicates/related entities	12 records share a published phone or email	Double contact	Check identity before outreach (12_DATA_QUALITY)
Thin categories	Digital & Visual Arts 129; Content & Media 248 (mostly emcees)	Under-representation in early community	Protect them with category quotas; hold brand-demand-dependent creators until there is real customer activity
No demand data	—	City and category choices reflect supply only	Re-weight once customer-side data exists

4. Seller acquisition segmentation model

The model uses ten dimensions but only **22 operating segments inside 3 ecosystem pods** for day-to-day work. The other dimensions act as filters and ranking inputs, not as segments, to avoid hundreds of empty micro-segments.

Dimension	How it is used
A Category	6 database categories
B Subcategory → Segment	1,078 free-text subcategories normalised into 22 segments
C Professional tier	A–E; tier D/E routed to the relationship-led P3 track
D City	Anchor (Delhi NCR, Mumbai) → Wave 1 (Bengaluru, Jaipur) → Wave 2 (six cities) → Wave 3 (tier-2)
E Commercial maturity	DB commercial sub-score (0–14): ≥ 11 mature, 8–10 active, < 8 early
F Marketplace familiarity	DB marketplace-affinity sub-score + platform associations (Aza, Ogaan, Pernia, WedMeGood, WeddingSutra, TAD, IDID ...)
G Contactability	Contact classes C1–C5
H Conversion probability	Acquisition Readiness Score (ARS) and within-category percentile
I Founding-professional potential	DB founding potential and the Founding Candidate Score
J Network/referral potential	DB network score and ecosystem pod

The 22 segments (records · contact-ready):

Pod	Segments
Wedding & Occasion	Occasion & bridal labels (378 · 282) · Menswear/groomswear (59 · 44) · Jewellery (109 · 78) · Independent MUAs (826 · 67) · Makeup studios (195 · 41) · Mehendi (148 · 10) · Wedding photo/film (423 · 232) · Emcees/hosts (162 · 37) · Wedding content creators (25 · 16) · Calligraphy & stationery (26 · 15)
Home & Space	Architecture (294 · 140) · Interiors (202 · 134) · Product makers (94 · 59) · Architecture/interior photographers (90 · 41) · Home & lifestyle labels (17 · 15) · Artists/illustrators (50 · 14)
Brand & Everyday Style	Contemporary/prêt labels (261 · 197) · Accessories (59 · 45) · Commercial/fashion photographers (52 · 22) · Design studios (53 · 35) · Bloggers/writers (55 · 13) · Production studios (6 · 1)

Each segment's size, readiness, network value, channel and lead angle are in **02_SEGMENTS**; every record's segment, priority, scores and recommended channel are in **06_OPERATING_OVERLAY**.

5. The acquisition funnel

The funnel runs from **Prospect** to **First enquiry/order/booking**. Full definitions, evidence rules, owners and time windows are in `UEPAKI_ACQUISITION_FUNNEL_AND_KPI_FRAMEWORK.md`. In summary:

#	Stage	Counts as conversion when...
0	Prospect	Record exists in the master
1	Contactable	Verified own-site route (C1) or professional social account (C3), re-checked on the day of outreach
2	Contacted	A 1:1, human-written message was sent through that route
3	Delivered	No bounce/failure within 48 hours
4	Engaged	Any human reply within 21 days, including “no”
5	Interested	Positive intent: asks about joining, agrees to a call, asks for terms
6	Information requested	Terms/steps sent at their request, or a call held
7	Registration started	A seller account exists for their identity
8	Registration completed	Flow finished, including the ₹1 + GST web charge
9	KYC / approval	Approved to sell under current checks (confirm the live checks before Wave 0 ; Q-KYC open)
10	Profile completed	Meets the profile standard, including consent-to-be-named recorded
11	First listing	At least one product, service or design listing visible to customers
12	Activated professional	9 + 10 + 11 all true, payout details complete
13	First enquiry/order/booking	First genuine customer interaction through Uepaki; then first paid order/booking = transacting

Messages sent is an input, never a result. Dashboards always show activated (and later transacting) professionals next to any volume figure.

6. Priority model (OS P0–P4)

The database's own priority marks 2,046 records as P0. The operating priority below is evaluated top-down; the first rule that applies wins.

Priority	Rule	What happens	Count
P4 — Hold	No verified route (C5), or Low evidence, or no dated public activity in 24 months	No contact; research queue only	557
P3 — Premium / aspirational	Tier D or E (and not P4) — regardless of score	No cold outreach. Founder-led, warm introduction only, after the founding cohort exists in that category and city (Wave 4)	58
P0 — Founding outreach pool	All of: route C1 or C3; research fully verified; activity within 12 months; city known; tier A–C; ARS ≥ 68 and top half of its category; DB founding potential ≥ 60	Waves 0–2 (First 25/100/300) draw from here	961
P1 — Next wave	Route C1–C4; ARS ≥ 58; city known	Wave 3 and fill for Wave 2; C4 records enriched first	1,661
P2 — Nurture / later	Everything else (mostly unknown city or low readiness)	Inbound and opt-in content only; re-score monthly	347

Acquisition Readiness Score (ARS, 0–100). Commercial activity 20 · recency 15 · join likelihood 15 · contactability 15 · seeking clients 10 · marketplace affinity 10 · quality 10 · category fit 5; minus 10 for Low evidence, 5 for any open verification flag, 5 for unknown city. **Not used:** follower counts, discovery value, tier, fame.

Why fame cannot create P0. Tier is not an input to ARS; tier D/E is routed to P3 before P0 is evaluated; and P0 requires “top half of its category”, not top of the whole database — so a strong independent mehendi artist competes with mehendi artists, not with famous designers. Result: of 961 P0 records, 195 are tier A, 639 tier B, 127 tier C, and **none** tier D/E.

How a prospect moves. Priorities are recomputed weekly. A P4 record moves up when research confirms a route or recent activity. A P1 moves to P0 when its open flag is cleared. A P0 that does not reply after the full sequence drops to “Contacted — no response” and is not re-approached for 60–90 days, and then only once, with real news. A “no” is permanent suppression.

7. Campaign waves

The plan assumes Wave 0 starts once the founder has answered FP-OUT and a working registration path exists. The tentative launch date (1 January 2027, internal only) leaves about 12 weeks — enough for Waves 0–3 if each wave's exit criteria are met on time. Weeks are relative to the Wave 0 start.

Wave	Weeks	Audience	Categories	Cities	Tier	Approx. contacts	Objective
0 — Controlled pilot	1–2	First 25 (OS-P0, verified own-site/social route, high evidence)	All 6	Delhi NCR, Mumbai	A–C (C ≤ 7)	25	Learn message/CTA; prove the end-to-end seller journey; first activated founding professionals
1 — Founding cohort	3–6	Ranks 26–100	All 6	+ Bengaluru, Jaipur	A–C	75	First complete pods in four anchor cities; consented names
2 — Category & city expansion	6–10	Ranks 101–300	All 6 (quotas)	+ Pune, Hyderabad, Chennai, Kolkata, Ahmedabad, Chandigarh	A–C	200	Category balance; pods in ten cities; channel and segment tests
3 — Reserve & enrichment	9–12	Founding reserve (318 in 07_FOUNDING_C ANDIDATES tranche T2), enriched C4 records, best remaining P1	Weighted to gaps (Beauty, Content, Digital)	Anchor + tier-2 where a pod can form	A–C	~250–450 (capacity-bound)	Fill gaps in pods; reach founding qualifying numbers
4 — Launch window	Launch ± 4 weeks	P3 premium names (warm introduction only); opted-in professionals; inbound	All	All open cities	D/E by introduction	~30–60 introductions + opt-in updates	Credibility layer; launch announcements with consented founding professionals; PR alignment
5 — Post-launch optimisation	Launch + 4 to + 12 weeks	Activated (to transacting); registered-not-activated; non-responders after 60–90 days (once); remaining P1/P2	All	All	All	Driven by results	Activation → first transaction; scale winning cells

Per-wave operating detail.

Wave	Channel	Message type	CTA	Follow-up logic	Success KPI	Exit criteria (to start next wave)
0	Founder email (24); Instagram DM (1)	Personal note, frames M-A / M-B (E01)	"Would a 15-minute call be useful?"	Day 4–5 value-adding note; day 10–12 closing note; stop	Reply rate; interest; ≥ 1 complete journey to activation	All 25 sequences complete; ≥ 4 replies (otherwise rewrite before Wave 1); every objection logged; registration → listing path proven or defects logged; FP-OUT wording in use
1	Founder email; IG DM for beauty/illustrators	Personal note in winning frame; pod framing (E04, if FP-OUT allows)	CTA-A vs CTA-B (E03)	Same 3-touch sequence; call within 48h of interest	Activated per contacted; pods per city	≥ 1 activated pod in at least 2 anchor cities; activation ≥ 50% of approved within 14 days (initial test threshold); legal review of outreach done
2	Email vs DM test (E05); founder notes for tier C and anchors, team-drafted notes for A/B	Personal note + honest status (live counts, consented names)	Winning CTA	Same; assisted onboarding (E11)	Activation by category and city; category balance	Each category ≥ 8% and none > 30% of activated (recommendation); pods in ≥ 6 cities; C2 re-check and enrichment sprints done
3	Email/DM;	Personal; peer-	Winning CTA	Same	Founding seats	Launch readiness of

Wave	Channel	Message type	CTA	Follow-up logic	Success KPI	Exit criteria (to start next wave)
	WhatsApp only to opted-in	introduced where consented (E12)			filled by activated professionals (FP-QUAL)	the seller journey confirmed by the founder
4	Founder-to-founder notes via warm introduction; opted-in WhatsApp/email updates; PR	Founder letter (premium); launch update (opted-in)	Conversation; activation	One follow-up only for premium names	Premium names activated without being used as bait; inbound activation	Launch + 4 weeks
5	All proven channels	Activation help; real progress updates	First listing / first transaction	Stage-based nudges	Transacting ÷ activated	Ongoing

Never contact all 3,584 records at once, and never add a wave because a list is ready. Waves are gated by exit criteria and onboarding capacity.

8. Channel strategy

Contactability is not consent. A published business email or Instagram account is a route the professional chose for business enquiries; one relevant, human-written, 1:1 first message with an easy opt-out is the most this system does without consent. A phone or WhatsApp number on a wedding marketplace is a customer-enquiry line and is **not** used for cold recruitment. Template or bulk WhatsApp requires a recorded opt-in per person, as WhatsApp Business policy requires.

Channel	Ideal prospect	Appropriate use	Advantages	Limitations / friction	Compliance considerations	Sequence position
Email (1:1, founder or team)	Labels, studios, photographers, design studios with an own-site business address (C1: 1,776)	First contact; written terms; follow-ups	Professional register; room for specificity; easy to log	Lower reply on busy inboxes; spam filters if sent in volume	Identify sender clearly; honour opt-out at once; personal data rules (DPDP Act, 2023) — lawyer review	1st for C1 records
Instagram DM (1:1)	Makeup artists, illustrators, creators, photographers (C3: 291; plus enriched C4)	First contact where no email; second route after email silence	Where these professionals work daily	Lands in message requests; volume triggers platform restrictions	No automation; no mass DMs; platform terms	1st for C3; 2nd for C1
WhatsApp (1:1 human)	Anyone who replied and asked to continue on WhatsApp	Conversation after consent	Fast, familiar	None without consent	Ask and record opt-in for any further updates	Only after a reply invites it
WhatsApp via AiSensy (template/bulk)	Opted-in professionals only	Launch updates, onboarding reminders, event invitations	Scales to hundreds	Template approval; per-conversation charges; quality rating risk	Explicit opt-in recorded per person; opt-out keyword; Meta's Business Messaging Policy	Wave 3+ for opted-in only. Eligible today: 0
LinkedIn	Architecture and interior practices with company pages (418 profiles recorded)	Founder-to-principal note	Professional context	Connection limits; low daily use among many professionals	Platform terms	Alternative to email for Space & Design
Website contact form	Studios/labels without a published email (436 records where a form is the best route)	First contact	Reaches the business owner's inbox	Hard to track replies; length limits	As email	1st where no email
Referrals / peer introductions	Peers named by an activated professional	Warm approach: "X suggested I write to you"	Highest trust	Depends on early activations	Only with the introducer's consent; no rewards (referral launch deferred)	Wave 2+
Professional communities (associations, design weeks, trade and wedding-industry groups)	Category anchors; city clusters	Talks, small founder-hosted sessions, partnerships	Credibility; many people at once	Slow to arrange; needs a real story	Do not imply endorsement by any association	Wave 3–4
Manual / in-person	Anchors and premium names in Delhi NCR and Mumbai	Studio visits, coffee	Strongest trust	Founder time	—	Selective, Waves 1–4

Channel	Ideal prospect	Appropriate use	Advantages	Limitations / friction	Compliance considerations	Sequence position
Calls to platform-listed numbers	C4 records	Not recommended	—	Customer-enquiry lines; intrusive	TRAI/DND rules and data-protection law — lawyer review first	Only if legal review allows, after enrichment fails

Standard 1:1 sequence (all waves): Day 0 first message → Day 4–5 follow-up that adds something useful (how a profile for their kind of practice is set up; an honest status update) → Day 10–12 short closing note (“I’ll leave it here; if timing changes, reply any time”) → stop. One channel at a time; never the same message on two channels the same day.

8.1 Message frames (examples — rewrite for every person)

First email — label (frame M-A, craft-led).

Subject: [Label] — a note from Uepaki

Hello [Name],

I was looking at [specific collection or recent product] on your site — [one accurate, specific observation about the work].

I’m [sender], [role] at Uepaki. We are building a marketplace in India where customers can discover and buy products and connect with creative professionals for services, bookings and projects. Before launch we are personally inviting a first group of professionals, city by city, across fashion, beauty, photography, design, art and content.

[FP-OUT sentence, exactly as the founder approves it.]

Would a 15-minute conversation be useful, to see whether it fits how [Label] sells today? If it isn’t relevant, just say so and I won’t write again.

[Sender name, role, Uepaki]

First Instagram DM — makeup artist (frame M-B, business-led).

Hello [Name] — I’ve been looking at your bridal work, especially [specific look]. I’m [sender] from Uepaki, a marketplace being built in India where customers can buy products and connect with creative professionals for services and bookings. We’re inviting a small first group of makeup artists, designers and photographers in [city] before launch. How do bookings usually reach you today? Happy to explain more if useful — and no problem at all if not.

When someone asks to move to WhatsApp.

Of course — I’ll message you there. Would you also like occasional Uepaki updates on WhatsApp (launch news, onboarding help)? You can stop them any time. *(Record: yes/no, date, wording shown.)*

Never in any message: reach/ranking/visibility/lead/booking/income promises; “free”; un-cleared offer numbers; names of anyone who has not joined and agreed to be named; competitor names; exclamation marks.

9. Category strategies (summary)

Full strategies, objections and responses: UEPKI_CATEGORY_ACQUISITION_PLAYBOOK.md.

Category	Best segments	Strongest cities (contact-ready)	Ideal early adopters	Proposition angle	Top objection	Channel	Founding strategy	Activation
Fashion & Lifestyle	Bridal/occasion, contemporary, jewellery, accessories, menswear	Delhi NCR 294 · Mumbai 112 · Jaipur 58 · Kolkata 34	Tier B labels with own store, recent drops, 1–2 stockists	An additional professional channel under the label’s own name — not a replacement for store or stockists	“We already have our own store and stockists”	Founder email	Fills fastest — cap at ~30% of founding community (recommendation)	First 5–10 existing products live within 7 days
Space & Design	Interiors, architecture, product	Delhi NCR 105 · Mumbai 56 · Bengaluru	Tier B studios publishing residential	Practice services and project work	“Work comes through referrals”	Email; LinkedIn	Makers first (inventory), studios as pod	Re-check 116 pending

Category	Best segments	Strongest cities (contact-ready)	Ideal early adopters	Proposition angle	Top objection	Channel	Founding strategy	Activation
	makers	43 · Ahmedabad 29	work; exhibiting makers	under the studio's name; makers sell pieces and take commissions			anchors	routes; 3–5 pieces or one service listing
Digital & Visual Arts	Design studios, calligraphy/stationery, illustrators	Mumbai 23 · Delhi NCR 15 · Pune 10	Stationery studios; illustrators who sell prints/commissions	Original work and commissions under their own name	Price undercutting; another profile to maintain	Email; IG for illustrators	~8% of founding community; link to Wedding and Brand pods	One product or commission listing
Beauty & Makeup	Independent MUAs, studios/academies, mehendi	Delhi NCR 22 · Mumbai 21 · Chandigarh 10 · Jaipur 10	Tier B MUAs with own site/IG, recent reviews, published packages	A professional profile next to the designers and photographers couples choose; service bookings at launch being confirmed	"Bookings already come through wedding portals and Instagram"; off-platform contact	Instagram DM; email; no cold WhatsApp	Network node of the Wedding pod; 1–2 per anchor city early; enrichment before Wave 2	Profile + one service listing; make the plan question explicit
Lens & Motion	Wedding studios, architecture photographers, commercial	Mumbai 54 · Delhi NCR 43 · Chennai 35 · Bengaluru 29	Tier A/B studios with own sites and recent work	Services next to the designers, studios and labels who commission them	"Leads via referrals / portals"	Email; DM	Hub nodes — one wedding + one architecture/commercial photographer per anchor city	Service listing + portfolio
Content & Media	Emcees, wedding content creators	Mumbai 30 · Delhi NCR 16	Emcees with own sites; content creators selling production	Hosting and content as professional services — clients, not followers	"Need proof brands are present"	Email; DM	Emcees in Wedding pods; creators/bloggers after launch	Service listing with format and pricing indication

10. Solving the chicken-and-egg problem

The loop. Established professionals ask “who else has joined?” Early professionals hesitate because nobody has. If Uepaki answers with invented names, inflated counters or implied endorsements, it breaks founder decision E3, breaks trust the first time anyone checks, and contaminates the founding community. The loop must be broken with true statements only.

The strategy: sell the seat, not the crowd — and build crowds that are small, local and complementary.

- Approach the right first people.** The First 25 and First 100 are commercially active independents with direct routes — people who gain most from being early and who are not waiting for a crowd. Premium names are deliberately excluded until later.
- Invite to found, not to join.** The proposition to an early professional is a role: helping form the first group in their city and category, with direct access to the founder and a say in how their category is set up (founder feedback sessions are an operational choice for the founder to confirm — they are not a product feature). The founding programme, in FP-OUT wording, sits behind this — never in front of it, and never with visibility implied (the programme carries no organic-visibility advantage).
- Batch by pod.** In any city, approach complementary professionals of the same ecosystem in the same week (for example, a bridal label, a makeup artist, a photographer and an emcee). The first “yes” in a pod gives every other member of that pod a relevant, non-competing peer — the strongest honest answer to “who else?”.
- Use category diversity as the credibility signal.** “Professionals across fashion, beauty, photography, design, art and content are being invited in [city]” is true from day one and is more relevant to a customer journey than one famous name.
- Use professional quality, stated as process.** It is true, and can be said, that the first professionals are being invited personally based on their work and active practice. It must not become “curated” or “exclusive” — Uepaki is open to all sellers (E10).
- Record consent to be named.** At activation, every professional is asked whether they may be named to prospective peers. From then on, answers to “who else?” use **live counts from the system and consented names only**.

7. **Turn early professionals into network nodes.** After activation, ask (once, without reward) whether there are two or three professionals they work with — a photographer, a stylist, a maker — who should hear about Uepaki, and whether they are happy to be mentioned. Approach those peers with “[Name] suggested I write to you” only with that consent.
8. **Approach larger names later, and properly.** Premium/marquee professionals (P3: 58, plus 11 held for data reasons) are approached in Wave 4, founder-led, through a warm introduction, once at least five activated founding professionals exist in their category and city (recommendation) and the category is visibly real. Their interest is never used as social proof until they have joined and agreed to be named.

The honest answer to “Who else has joined?” (template).

Honestly, we are at the start. As of today [live number from the system] professionals have registered, across [categories]. [If any have consented: “Among them are [names], who’ve said I can mention them.”] We’re building each city in small groups — a designer, a makeup artist, a photographer — so that the first professionals are complementary rather than competing. That’s why I’m writing to you now rather than after launch.

Never: invent or round up numbers; show a counter that is not live; imply an association, platform or brand partnership; name people who are only “in conversation”; use scarcity beyond a real, approved cap; use a famous name to recruit others before that person has joined and consented.

11. The ideal initial community (strategic recommendation)

The goal before launch is not the most registrations; it is a **credible, transacting-ready professional ecosystem** that a customer can actually use and a professional can recognise as serious.

Dimension	Recommendation	Basis
Size at launch	120–180 activated professionals (recommendation)	Enough for complete pods in four anchor cities plus partial pods in up to six more (≈ 19 per complete city set of pods), within what a small team can onboard properly in ~12 weeks
Categories	All six live; each ≥ 8% and none > 30% of activated	Prevents a single-category marketplace; protects thin categories
Cities	Four anchor cities with complete pods (Delhi NCR, Mumbai, Bengaluru, Jaipur); up to six Wave-2 cities with at least one pod forming	Supply evidence (\$3); no demand data yet
Pods	In each anchor city: Wedding & Occasion (≥ 3 labels, ≥ 3 beauty, ≥ 2 photographers, ≥ 1 emcee/content) + Home & Space (≥ 2 studios, ≥ 2 makers, ≥ 1 architecture photographer) + Brand & Everyday Style (≥ 3 labels, ≥ 1 design studio, ≥ 1 commercial photographer)	The smallest groups in which each member has two relevant, non-competing peers
Tier mix	A (emerging) 20–30% · B (established independent) 45–55% · C (strong mid-tier) 20–30% · D/E only by warm introduction, ≤ 5%	Independents drive activation; mid-tier gives credibility; premium is a later signal
Products vs services	Product-selling professionals (labels, jewellery, makers, artists, stationery) ≥ 40% of activated	Which service/booking flows are switched on at launch is unverified (EV-09); a product base guarantees there is something to buy regardless
Emerging vs established	Both, deliberately — newer professionals and established independents side by side	Brand principle “merit over momentum” (stated as intent, not as a ranking claim)
Consent to be named	≥ 50% of activated professionals (recommendation)	Needed for honest social proof and for PR (the PR strategy needs “named founding creators who have agreed to speak”)

What a credible early Uepaki ecosystem looks like. In each anchor city, a customer planning a wedding can find a label, a makeup artist, a photographer and someone to host the event; a customer doing up a home can find a studio, a maker and the photographer who documents both; a young label can find a photographer and a designer. Every professional in it is real, active and reachable, and a meaningful share have agreed to be named.

12. Founding-professional funnel

The founding cohort is capped at **500 sellers** (founder intent, S07). The qualifying rule is still a missing record; this system recommends “registration completed + approved + first live listing” (FP-QUAL) so that seats go to activated professionals.

Candidate groups built from the database (all in UEPAKI_SELLER_ACQUISITION_SEGMENTATION.xlsx):

Group	Definition	Size	Category spread
Founding-professional candidates (07)	Contact-ready; ranked by Founding Candidate Score within category; category-balanced (square-root allocation)	600 ($\approx 1.2 \times$ the 500-seat cap; T1 = 282 already in the First 300, T2 = 318 reserve)	Fashion 138 · Beauty 118 · Space 113 · Lens 111 · Content 67 · Digital 53
High-conversion independents (10)	Tier A/B independents; ranked by Conversion Likelihood Score (join likelihood, seeking clients, recency, marketplace affinity, contactability)	200	Beauty 59 · Fashion 52 · Lens 41 · Content 28 · Digital 19 · Space 1 (Space is studio-led)
High-network-value candidates	Network/referral potential ≥ 50 among contact-ready (see 06 filter) and the hub segments: wedding photographers, product makers, bridal labels, makeup studios/academies	Filter in 06	—
Category anchors (08)	Tier B/C, high/medium evidence; up to 3 per category per city across ten cities; Anchor Score = quality + commercial + network + readiness	147	Fashion 30 · Lens 30 · Space 30 · Beauty 29 · Digital 16 · Content 12
City anchors (09)	Up to 8 per city (max 2 per category) for the 12 largest cities	94	All six
Aspirational names (11)	Tier D/E	69 (58 P3 + 11 held)	Space 26 · Fashion 18 · Beauty 13 · Digital 6 · Lens 6

“Anchor” does not mean celebrity. Anchors are tier B/C professionals with strong quality, commercial and network evidence — the people who make a category look real to peers. Tier D/E are excluded from anchor lists by design.

Recommended acquisition order.

1. City anchors in Delhi NCR and Mumbai that are also in the First 25 (pilot).
2. High-conversion independents in the same pods (fast activation, honest early numbers).
3. Category anchors in the four anchor cities (credibility per category).
4. Remaining founding candidates (T1) in Wave-2 cities, pod by pod.
5. Founding reserve (T2) and enriched Beauty/Content records to fill pod gaps.
6. Aspirational names — Wave 4, warm introduction only.

13. Acquisition economics

No cost or conversion result is assumed. The model in 14_ECONOMICS has blank inputs and formulas.

Cost base for a period.

- Labour = blended hourly cost $\times$ (contacts $\times$ minutes per first contact + follow-ups $\times$ minutes per follow-up + calls $\times$ minutes per call + registrations $\times$ onboarding minutes) $\div$ 60
- Blended hourly cost = founder share $\times$ founder hourly value + (1 – founder share) $\times$ team hourly cost
- Tools and other = email tool + WhatsApp BSP subscription + opted-in conversation charges + landing page/content + other
- Total acquisition cost = labour + tools and other

Cost per stage = total acquisition cost $\div$ number reaching that stage in the period:

Metric	Formula
Cost per contact	Total cost $\div$ contacted
Cost per conversation	Total cost $\div$ engaged (replied)
Cost per interested prospect	Total cost $\div$ interested
Cost per registration	Total cost $\div$ registration completed
Cost per approved professional	Total cost $\div$ approved
Cost per activated professional	Total cost $\div$ activated
Cost per transacting professional	Total cost $\div$ transacting (first genuine enquiry/order/booking)

Founding-programme cost (not cash; CA review required). Revenue foregone = founding sellers' commissionable GMV $\times$ 0.02 (founder intent: 2-point reduction, lifetime). Track it per cohort; it is the real long-term price of each founding seat.

Capacity arithmetic (math, not a forecast). Contacts needed = target activated ÷ contact-to-activation rate. If Uepaki wanted 150 activated professionals from outreach alone: at 5% end-to-end it would need 3,000 contacts (more than the 1,538 contact-ready today); at 10%, 1,500; at 20%, 750. Wave 0 exists to measure the real rate. If it is low, the levers are enrichment of C4 records, inbound (PR with consented founding professionals) and peer introductions — not mass messaging.

Measure from the first campaign: minutes per contact, follow-up and onboarding; founder hours per activated professional; tool spend; counts at every stage; reasons for drop-off at registration, approval and first listing.

14. Daily and weekly operating system

Team (small). Founder (Sahil) — first notes to anchors and tier C, calls, weekly decisions. Outreach lead — selection, drafting, sending, replies, tracker. Onboarding lead (can be the same person in Waves 0–1) — registration help, profile and first listing.

Daily rhythm.

Time	Activity	Rule
09:30 (15 min)	Pipeline stand-up	Yesterday's replies, today's pod batch, blockers
10:00–11:30	Prospect selection and outreach	Pick today's pod batch from the wave list in rank order; re-verify the route on the live page; write each note from Why selected + Lead angle; log channel, variant and experiment cell before sending. Cap: ≤ 10 new first contacts per person per day in Waves 0–1 (initial test threshold)
11:30–12:30	Replies and qualification	Answer every reply the same business day. Qualify: interest? category fit? questions on fees, bookings, off-platform contact, terms? Move stage
14:00–15:30	Calls and onboarding	15-minute calls; assisted registration; profile and first listing
15:30–16:30	Follow-ups	Day 4–5 and day 10–12 notes due today; stuck-stage nudges (> 7 days)
16:30–17:00	Escalation and close	Escalate to founder: anchor/tier C replies, policy questions (SP-4a, fees, plans, terms), any complaint; update suppression list; end-of-day counts

Escalation matrix. Policy or terms question → founder (answer only from approved records). Complaint or “stop” → suppress immediately, founder informed same day. Platform warning or restriction → stop that channel, founder decides. Product defect in the seller journey → engineering queue with the Prospect ID, and the professional gets a personal update.

Weekly rhythm.

Day	Review	Output
Monday (45 min)	Campaign planning	This week's pod batches by city; capacity check (new contacts ≤ onboarding slots ÷ observed interest rate)
Wednesday (20 min)	Activation review	Every record stuck > 7 days in Interested, Registration started, Approved or Profile completed has a named action
Friday (60 min)	Conversion, category, message testing, hygiene	Funnel by wave/cell; category and city balance; experiment readouts and decisions; database hygiene (bounces → research, suppressions, re-checks, new P4/P0 movements); list of founder decisions needed

Decision rules (initial test thresholds — replace after Wave 0–1).

If...	Then...
Bounce/failure > 5% in a batch	Stop; re-verify routes before sending more
Reply rate < 10% after 40 contacts in a cell	Pause the cell; investigate message and segment before adding volume
Wave 0: fewer than 4 replies from 25	Rewrite the message frame before Wave 1
Interested → registration completed < 30% after 10 interested	Investigate registration friction (₹1 + GST payment step, KYC, form)
Approved → activated < 50% within 14 days	Onboarding problem: switch to assisted onboarding; add no new volume
Opt-outs/complaints > 2%, or any platform warning	Stop the channel; review with founder
“Who else?” raised in > 30% of replies in a city	Prioritise pod completion and city anchors there; pause new cities
A category exceeds 30% of activated	Slow that category's outreach; push under-represented ones
A cell achieves reply ≥ 20% and activation ≥ 30% of interested over ≥ 30 contacts	Double its weekly allocation, within onboarding capacity
Onboarding backlog > 5 interested professionals waiting > 72 hours	Stop new first contacts until cleared

15. Experimentation system

Full framework: UEPAKI_ACQUISITION_EXPERIMENTATION_FRAMEWORK.md; planned tests and log: 16_EXPERIMENT_LOG.

- **One variable at a time**, alternated within category and ordered by readiness so arms are comparable (the list workbooks already assign cells).
- **Measure downstream** — reply for message tests, registration for CTA tests, activation for onboarding tests.
- **Small cells, large effects**. With 25–50 per arm only differences of about 2× are detectable; at 40 contacts, a true 25% reply rate would produce three or fewer replies only about 0.5% of the time — which is why 40 is the stop tripwire.
- **Planned**: E01 message frame (Wave 0) · E02 sender · E03 CTA (Wave 1) · E04 founding framing · E05 email vs Instagram · E06 tier A/B vs C · E07 pod present vs absent (the chicken-and-egg test) · E08 timing · E09 follow-up content · E10 landing page (blocked until LP-1) · E11 assisted vs self-serve onboarding · E12 peer introduction vs cold.
- **Never test** dishonest variants (fake scarcity, social proof, outcome promises, un-cleared terms).
- **Cheap learning**: the database's evidence fields replace paid enrichment; founder time is the main cost, so it goes to anchors, tier C and calls; no paid tools or ads until a channel is proven on ≥ 40 contacts with activation evidence.

16. Final priority lists

All lists are filtered views of the master keyed by Prospect ID. None is sorted by follower count; fame is not an input.

List	File / sheet	Size	Composition	Selection logic
A. First 25	UEPAKI_FIRST_25_ACQUISITION_LIST.xlsx	25	Beauty 6 · Fashion 5 · Space 5 · Lens 4 · Content 3 · Digital 2; Delhi NCR 13 · Mumbai 12; 17 segments; tier A 2 · B 16 · C 7; 24 high-evidence; 16 active within 3 months	OS-P0; pilot cities; square-root category quota; segment spread; tier C capped at 7
B. First 100	UEPAKI_FIRST_100_ACQUISITION_LIST.xlsx	100	Beauty 23 · Fashion 22 · Space 18 · Lens 17 · Content 12 · Digital 8; Delhi NCR 43 · Mumbai 37 · Bengaluru 10 · Jaipur 10; 21 segments; all OS-P0	As A; four anchor cities; ≤ 40 per city
C. First 300	UEPAKI_FIRST_300_ACQUISITION_LIST.xlsx	300	Beauty 70 · Fashion 65 · Space 53 · Lens 52 · Content 35 · Digital 25; ten cities; tier A 45 · B 173 · C 82; 271 OS-P0 + 29 OS-P1	Quotas = square root of category size, capped at 60% of each category's contact-ready pool
D. Founding candidates	Segmentation 07	600	Category-balanced (see §12)	Founding Candidate Score within category
E. Category anchors	Segmentation 08	147	≤ 3 per category per city, ten cities	Anchor Score; tier B/C only
F. City anchors	Segmentation 09	94	≤ 8 per city, ≤ 2 per category, 12 cities	Anchor Score
G. High-conversion independents	Segmentation 10	200	Tier A/B, category-balanced	Conversion Likelihood Score
H. Premium / aspirational	Segmentation 11	69	Tier D/E	Network reach; approached only in Wave 4 by warm introduction with stated prerequisites

Every row in A–C carries a “**Why selected**” reason built from the database's own evidence (readiness and category percentile, commercial signal, recent activity, marketplace familiarity), a **lead angle**, the **likely objection** and an **experiment cell**.

16.1 The First 25 (Wave 0)

Route: Email/form = 1:1 message to the business email or enquiry form on the professional's own website; Instagram DM = professional account. Cell: E01 message frame. Evidence text is quoted from the database (activity dates are the latest dated public activity found by research).

17. Risks and safeguards

Risk	Safeguard
Outreach runs ahead of product readiness (registration, KYC, listing defects)	Wave 0 doubles as an end-to-end journey test; exit criteria require a proven path
Founding seats consumed by non-activated sign-ups	FP-QUAL recommendation; weekly founding-seat integrity check
Messages imply un-cleared terms or visibility advantages	FP-OUT wording; claims table (§2); weekly review of sent messages
Consent breach (bulk WhatsApp, calls to platform numbers)	Contact classes; opt-in log; suppression list; Q-LEGAL-OUT before Wave 1
Category or city skew (Fashion and Delhi NCR are deepest)	Quotas, category caps, pod minimums
Wedding-season unavailability of service professionals	Approach Beauty/Lens/Content early in the window; measure reply latency by month (assumption A3)
Founder time becomes the bottleneck	Team drafts for tier A/B; founder on anchors, tier C, calls (E02 if needed)
"Who else?" stalls established professionals	Pod batching; consented names; premium names only in Wave 4

18. Quality gate

Check	Result
No unsupported Uepaki claims	Pass — proposition uses FD-06 and recorded decisions with status labels
No fabricated social proof	Pass — live counts and consented names only; templates use placeholders
No guaranteed leads or sales	Pass — prohibited in every script and playbook
No promise of preferential organic ranking	Pass — founding programme described with "no organic-visibility advantage"; no visibility wording at all in outreach (B4/EV-08)
No invented seller benefits	Pass — founder feedback sessions flagged as an operational choice to confirm
No invented traction	Pass — economics and KPI sheets have blank inputs; illustrative arithmetic labelled
No private contact information	Pass — no phones, emails or WhatsApp links in any deliverable; public business pages only
No marketing-consent assumptions	Pass — opt-in count is 0; AiSensy only after recorded opt-in
No celebrity bias	Pass — tier D/E cannot be P0; fame not scored
No category bias	Pass — square-root quotas; within-category percentiles; founding and independents lists rebalanced
No city bias without evidence	Pass — city order follows contact-ready supply; absence of demand data stated
No mass-spam recommendation	Pass — daily caps, gates, stop rules, suppression
No alteration of founder decisions	Pass — new questions raised as requests only
